

# Addressing Fuel Challenges in Oil and Gas Business

## INTRODUCTION

*Oil and gas businesses refer to companies that are involved in the exploration, extraction, refinement, and distribution of petroleum and natural gas products.*

## CHALLENGES

A large oil and gas company was facing challenges in accurately monitoring its fuel usage and ensuring compliance with regulations. The company had multiple fuel storage tanks across various locations, making it difficult to track fuel levels and usage patterns. The company was also concerned about fuel theft and unauthorized usage, which could impact its bottom line and reputation.

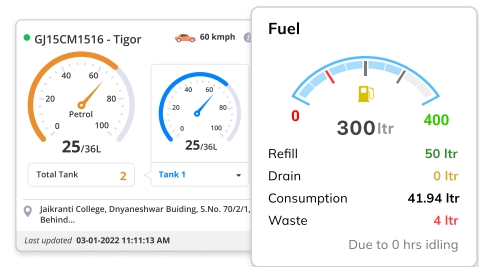

## SOLUTIONS

To address these challenges, the oil and gas company implemented our fuel monitoring software.

It provided accurate monitoring of fuel usage, transfer, or removal with the help of fuel flow meter. There was better visibility and control over fuel usage across various locations.

The software also provided alerts and notifications for fuel-related issues, such as low fuel levels, fuel theft or leakage, and equipment malfunctions.

**Fuel Pilferage**  
 Vehicle No 7749 detected fuel pilferage at  
 Park Enclosed

## RESULTS

**Monitor accurate fuel usage** – With remote access to fuel data, managers started to monitor accurate fuel usage and made informed decisions from anywhere at any time.

**Prevent Fuel Theft** - The company is now able to track its fuel usage across various locations and prevent fuel theft and unauthorized usage.
